

Engine Clean

Product Description:

AutoProfi Engine Clean removes sludge, dirt and contamination from the internal engine surfaces. If you're not using Engine Clean once a year, you are putting clean oil into a dirty engine every time you change your oil. You're also leaving harmful acids to accumulate in your engine which compounds pollutants and other hazardous emissions.

AutoProfi Engine Clean effectively optimizes engine performance, reducing both oil and fuel consumption. It's TUV-certified and proven to:

- Boost power
- Neutralize harmful engine acids and reduce pollution
- Clean and quieten noisy hydraulic valve lifters
- Extend the engine's life span

Directions for Use:

Use once a year or every 12,000 miles – before having the vehicle's oil changed.

1. Ensure the engine is OFF.
2. Add a full can of Engine Clean to old oil in the oil pan.
3. Start the engine and run it at idle for 10-15 minutes.
4. Turn engine OFF.
5. Change the vehicle's oil as recommended by the manufacturer.

Technical Specifications:

Application Fields: For all petrol (gasoline) and diesel engines

Reaction Time: Approx. 15 minutes

Consumption: 250ml for up to 5 quarts (5 liters) of oil

Packaging Units: 250 ml

Part Number: 43210
